FYP3024 FINAL YEAR PROJECT • COMPLETE SPEAKER SCRIPT (20 SLIDES)

PINJAMGENG: SIMPLE & NATURAL PRESENTATION SCRIPT (EN)

Smart Event Equipment Booking and Inventory Management System

Candidate: Nursyafiqah Zulaikha Binti Zilkamal (AM2412018113)

Supervisor: Madam Jihadah Binti Ahmad

Program: Diploma in Computer Science (CC101)

Faculty: Faculty of Computing & Multimedia (FCOM), UPTM

Live Cloud System: https://pinjamgeng.infinityfreeapp.com/

Estimated Duration: 8 – 10 Minutes (Calm, Clear & Confident)

1 Cover Slide

[Action: Look at the panel, smile and take a deep breath]

"Assalamu'alaikum and good morning to the evaluators and my supervisor, Madam Jihadah. My name is **Nursyafiqah Zulaikha Binti Zilkamal**, matrix number **AM2412018113** from the **Diploma in Computer Science (CC101)**. Today, I am proud to present my final year project entitled: **PinjamGeng: Smart Event Equipment Booking and Inventory Management System**."

2 Project Background

[Action: Next Slide, speak clearly and naturally]

"PinjamGeng is a responsive web application developed using PHP, MySQL, and Tailwind CSS specifically for student clubs and associations at UPTM. It allows students to check real-time stock availability and submit borrowing requests online **24/7**. This eliminates manual paper forms and logbooks, prevents booking conflicts, and ensures organized return handovers."

3 Problem Statements

[Action: Next Slide, highlight points 1 and 2]

"Before building the system, I identified two main problems on campus:
First, the traditional manual paperwork and decentralized process make it difficult to know stock availability, leading to double-bookings, communication misunderstandings, and lost records.
Second, students struggle to identify which equipment items are needed for their specific events, while existing systems only allow borrowing items individually with no pre-bundled event packages."

4 Project Objectives

[Action: Next Slide]

"To solve these issues, I established two core objectives within the 12–week development timeframe:
First, to develop a web-based system enabling students to check stock and submit requisitions online, while administrators manage inventory and approvals.
Second, to provide curated smart event packages for at least four event categories: seminar, workshop, meeting, and photography.
Both objectives were **100% completed** successfully within 12 weeks."

5 Literature Review: Existing Systems

[Action: Next Slide, briefly summarize the 3 reviewed systems]

"Prior to development, I conducted a literature review of three existing asset tracking systems:
1. Cheqroom: Excellent asset bundling and calendar booking, but its enterprise subscription cost is too prohibitive for campus budgets.
2. Booqable: Intuitive booking wizard, but heavily designed for commercial rental businesses requiring invoices, security deposits, and credit card payments.
3. EZOfficeInventory: Full lifecycle tracking with service tickets, but has a steep learning curve and lacks campus-tailored event packages."

6 Comparison & Research Gap

[Action: Next Slide, highlight the green Proposed System column]

"This comparison matrix highlights the research gap filled by PinjamGeng. While existing systems provide basic online booking, they fail to offer **curated event packages**, **standardized A4 digital loan slips**, and are expensive.
PinjamGeng bridges this gap completely by providing an end-to-end solution tailored specifically for university clubs at zero subscription cost."

7 Agile Scrum Methodology

[Action: Next Slide, reference the 5 sprint cycle]

"For development, I adopted the **Agile Scrum methodology** divided into **five two-week sprints**: from database architecture in Sprint 1, auth and inventory in Sprint 2, booking wizard and conflict prevention in Sprint 3, return handling and maintenance ticketing in Sprint 4, to cloud deployment and UAT survey in Sprint 5. This iterative process ensured continuous alignment with my supervisor."

8 Unit Testing

[Action: Next Slide, show the UT01 to UT05 results table]

"For Unit Testing, I tested five critical backend functions — Bcrypt password hashing, invalid credential handling, real-time stock computation, date range validation, and **UT05** which automates maintenance ticket logging whenever an item is returned damaged. All test cases achieved a **100% Pass rate** without errors."

9 Integration Testing

[Action: Next Slide]

"In Integration Testing, I verified end-to-end data flow between modules — from student requisition submission, real-time database stock deductions, admin session guards, to return condition processing. All five integration test cases passed **100% seamlessly**."

10 UAT Questionnaire Overview

[Action: Next Slide, point out the actual Google Form on the right]

"Once deployed on the cloud, I conducted User Acceptance Testing (UAT). As shown on the real Google Form display on the right, **30 UPTM campus respondents** participated — including club presidents, event exco members, and academic advisors across six evaluation sections."

11 Section A: User Profile

[Action: Next Slide, point to the 3 donut/pie charts]

"Section A covers user demographics: **96.7%** are active student club excos, **50%** possess 1 to 2 years of event management experience, and **42.5%** borrow equipment frequently each semester. This confirms our feedback comes from active, representative target users."

12 Section B: Usability Evaluation

[Action: Next Slide]

"For Section B Usability: **79.3%** rated the system as Easy or Very Easy to use, and **93.4%** agreed that the *2-Step Booking Wizard* made requisition intuitive and quick. Zero respondents reported difficulty navigating the platform."

13 Section C: Functionality Evaluation

[Action: Next Slide]

"In Section C Functionality: **89.7%** confirmed the Smart Packages significantly simplified equipment selection, **86.7%** validated accurate stock counts, and **89.7%** confirmed the conflict engine successfully prevented scheduling overlaps."

14 Section D: Requisition Efficiency & Documentation

[Action: Next Slide]

"Section D examines operational efficiency: **86.7%** confirmed online requisitions are significantly faster than paper forms, **82.8%** appreciated the downloadable official A4 Loan Slip, and **83.3%** affirmed that physical check-in inspections foster borrower accountability."

15 Section E: Overall Satisfaction

[Action: Next Slide]

"For overall satisfaction in Section E: The top favored features were **Live Stock Availability (70%)** and **Smart Event Packages (63.3%)**. Overall, **76.7% awarded 4 to 5 stars**, yielding a **90% overall positive satisfaction rate**."

16 Section F: Open-Ended Feedback

[Action: Next Slide, reference feedback cards]

"Slide 16 highlights qualitative feedback. Respondents praised the convenient package selection and stock transparency. Additionally, several users complimented the warm brown aesthetic as clean, modern, and visually appealing."

17 Core Innovations & Live Cloud

[Action: Next Slide]

"In summary, PinjamGeng delivers three core innovations:
1. **Automated Conflict Engine:** Automatically blocks conflicting date and stock requests.
2. **1-Click Smart Packages:** Reduces equipment selection time from 15 minutes to under 1 minute.
3. **Return Condition & Maintenance Engine:** Inspects physical condition ('Good' vs 'Damaged') and automatically quarantines damaged items into maintenance status.
The platform is live and operational at **pinjamgeng.infinityfreeapp.com**."

18 Future Works

[Action: Next Slide]

"For future enhancements, the system can incorporate: **IoT Barcode / QR Code scanning** for rapid counter dispatch, **automated WhatsApp / Telegram reminders** for upcoming return due dates, and **online fine payment integration via FPX**."

19 Conclusion

[Action: Next Slide, conclude with confidence]

"In conclusion, PinjamGeng has successfully fulfilled all project objectives within 12 weeks. With **100% test pass rates** and **90% user satisfaction**, the system proves to be robust, practical, and ready for deployment across UPTM campus clubs."

20 Closing & Q&A Session

[Action: Next Slide, smile and open for questions]

"That concludes my presentation. Thank you very much to Madam Jihadah and the panel of evaluators for your time and attention. I am now pleased to answer any questions. Thank you!"
